GENERAL ADVISORY EXTENDED TO CENTRAL SAN DIEGO COUNTY COASTAL WATERS *RAIN BRINGS URBAN RUNOFF TO CENTRAL COUNTY BEACHES*

The Department of Environmental Health has extended the General Advisory for north county beaches issued yesterday to include central county coastal waters following rain in those areas today. Swimmers, surfers, and other ocean users are warned that the levels of bacteria can rise significantly in ocean and bay waters, especially near storm drains, creeks, rivers, and lagoon outlets that discharge urban runoff. Urban runoff may contain large amounts of bacteria from a variety of sources such as animal waste, soil, and decomposing vegetation. While many coastal storm drains within San Diego County are permanently posted with white metal warning signs, additional temporary warning signs are not posted for General Advisories.

Activities such as swimming, surfing and diving should be avoided for 72 hours following rain. This includes beaches from San Onofre State Beach south to Point Loma, and Mission Bay. Elevated bacteria levels can persist after a rainstorm depending upon the intensity of the storm, volume of runoff and ocean and current conditions.
